Advisory Editor of *Soviet Physics–Technical Physics:*
Herbert Lashinsky, Institute for Fluid Dynamics and Applied Mathematics, University of Maryland, College Park, Maryland 20742

Soviet Physics–Technical Physics, a translation of ЖУРНАЛ ТЕХНИЧЕСКОЙ ФИЗИКИ, *Zhurnal Tekhnicheskoi Fiziki*, is published monthly by the American Institute of Physics for the purpose of making available in English reports of current Soviet research in physics as contained in the *Journal of Technical Physics* of the Academy of Sciences of the USSR (editorial address: Mendeleevskaya liniya 1, Leningrad, 199164, USSR). The translations began with the 1956 issues.

The American Institute of Physics and its translators propose to translate faithfully all the material appearing in the original articles. The views expressed in the translations are therefore those of the original authors, and not of the translators nor of the American Institute of Physics.

The transliteration of the names of Russian authors follows essentially the standard agreed upon by the British Standards Institute and the American National Standards Institute (Committee Z39).

Soviet Physics–Technical Physics is translated and produced for the American Institute of Physics by Consultants Bureau, a division of Plenum Publishing Corporation. One volume is published annually beginning with the July issue.

Subscriptions, renewals, address changes, and single-copy orders should be addressed to: Subscription Fulfillment Division, American Institute of Physics, 335 East 45th Street, New York, N.Y. 10017. Allow at least six weeks advance notice. For address changes please send both old and new addresses, and, if possible, include an address-stencil imprint from the mailing wrapper of a recent issue. For your convenience **a change of address form is included in every issue of** *Physics Today*; please use it.

Subscription prices (for Vol. 18, July 1973–June 1974):

Complete volumes of *Soviet Physics–Technical Physics* are available on microfilm (16 mm or 35 mm reels or cartridges): Vols. 1–16 (July 1956–June 1972) $ 1095; Vol. 17 (July 1972–June 1973) $80.

Soviet Physics–Technical Physics also appears on a monthly basis in *Current Physics Microform* (CPM) Section II ($1500 per year) along with 15 other translation journals published by the American Institute of Physics and its member societies. A subject index to CPM, *Current Physics Titles*, is published monthly in 3 sections (Atoms & Waves, Solid State, Nuclei & Particles) at $10 per section for members and $25 for nonmembers. Abstracts of articles to be published in *Soviet Physics–Technical Physics* appear two or more months ahead in *Current Physics Advance Abstracts*, available in 3 sections at $15 per section for members and $40 for nonmembers.

2062 **Author index to volume 17**

This index is based on the 1973 *Physics and Astronomy Classification Scheme* developed by AIP. It is not a translation. It was produced by computer-aided photocomposition directly from the magnetic tapes of the AIP's Current Physics Information System. Suggestions for improvements as well as other comments are welcome and should be addressed to the Editor.

A new feature introduced in this index is the inclusion of microfilm reel and frame numbers for the convenience of those wishing to find articles in *Current Physics Microform* (CPM), the monthly microfilm edition of the complete set of journals of the American Institute of Physics. These numbers are given in the form **CPM-7201A0321**, where 72 refers to the year, 01 denotes the month (January in this example), A the cartridge (generally there are four cartridges every month: A, B, C, D), and 0321 the frame.

CURRENT PHYSICS *ADVANCE ABSTRACTS* IS TIMELY...

Subscribers to **Current Physics Advance Abstracts** (CPAA) receive abstracts of articles appearing in the world's leading physics journals an average of two to four months in advance of their publication in the primary journals. A subscription to CPAA can fulfill your need for timely and compact information on the current physics literature.

Current Physics Advance Abstracts works because the authors of the articles in the primary journals realize the amount of increased interest that is produced when the abstracts appear in CPAA in advance of publication. Therefore, the authors are willing to spend the time to index their articles and to have the abstracts retyped in the required format. The abstract is published in CPAA when the atricle is accepted for publication by the editor of the primary journal.

Current Physics Advance Abstracts is continually adjusting to the changing and evolving needs of the users. Initially, CPAA covered only AIP-published journals, but its coverage has now expanded to include non-AIP-published journals and is continuing to expand as editors and publishers of journals see the value of being included in CPAA.

- Over 1500 articles are previewed monthly. Each issue of CPAA contains:
- Titles of articles. Authors' names. Address of the first listed author. Date the article was received.
- Abstracts indexed so that they appear under at least two different subject headings. Publication dates of the journals in which the full text of the article will appear.
- Complete reprints of the latest Tables of Contents of journals covered by CPAA.

Current Physics Advance Abstracts is published monthly in the form of three separate journals covering these fields:

Atoms and Waves
General Interest. Applied Mathematics. Quantum Mechanics. Statistical Physics. Atomic Physics. Molecular Physics. Physical Chemistry. Physics of Fluids and Plasmas. Vacuum Physics. Cryogenics. Acoustics. Optics. Geophysics. Biophysics.
